#### PROGRAM INFORMATION

Learning science has never been this much fun for all ages!

During this self guided tour of LEGOLAND, students can learn the physics of matter and energy along with interactions between the two with applied learning on life size machines— LEGOLAND rides! They will also be able to discover the difference between a shell structure and frame structure and how pulleys and gears can be a vital part of their architecture.

But wait, there's more....the fun of learning doesn't stop there, this field trip program also includes admission to LEGOLAND's Sea Life Aquarium where students can explore unique undersea habitats. Discover what animals and plants need to do to thrive. See a Giant Pacific Octopus and learn about their camouflage, jet propulsion and ink-squirting capabilities, or learn why coral reefs are called "trees of the sea." Learning Possibilities are endless.
